MP.112.PH – Office-based Laryngeal Injections for Vocal Cord Augmentation

This policy applies to the following lines of business:
✓ Premier Employee

Premier Health Plan considers office-based Laryngeal Injections for Vocal Cord Augmentation medically necessary for the following indications:

Coverage of Radiesse Voice, Radiesse Voice Gel, Cymetra, steroids or autologous fat injection augmentation for glottal/vocal cord insufficiency includes any of the following:

a) Vocal fold paralysis resulting from but not limited to:
   - Prior neck or chest surgery that damaged the vagus or recurrent laryngeal nerve
   - Lung or thyroid cancer
   - Complications from endotracheal intubation
   - Tumors of the skull base, neck, or chest
   - Blunt trauma to the neck or chest
   - Infections (ie Lyme disease)
   - Stroke
   - Neurological conditions (ie Multiple Sclerosis, Parkinson’s Disease)

b) Vocal cord paresis;

c) Vocal fold scarring;

d) Presbylaryngitis (age-related loosening of the vocal cords aka vocal cord atrophy); or

e) Parkinson’s disease

Indications for office setting augmentation include all of the following:

a) Cooperative patients with a strong gag reflex;

b) Avoidance of general anesthesia in patients with significant comorbidities;

b) Symptoms that do not merit the risk of general anesthetic;

e) Treatment trials in situations of uncertain benefit and when the diagnosis is uncertain

Note: The setting for the procedure is usually based on the general indication, patient safety and individual surgeon preference.

Limitations
Injections of bulking agents into the vocal cords for indications other than listed above and non-FDA approved laryngeal implant materials such as, but not limited to: Juviderm, Hylaform, Restylane, Captique, methylcellulose injections, Sculptra, Teflon and/or collagen products such as CosmoDerm/Zyplast/Zyderm

Background
The left and right vocal fords of the larynx muscle move away or towards one another in order to open and close the glottis. Glottal incompetence is the inability of the vocal folds to close the glottis adequately, resulting in vocal abnormalities, shortness of breath while talking, and an inability to produce an adequate cough.

An evaluation for these symptoms by an otolaryngologist or head/neck surgeon would include:
- Medical history including onset and severity of symptoms
- Voice handicap index 10 item scale (VHI-10)
- Digital videostroboscopic laryngeal examination
- Transnasal flexible fiberoptic laryngoscopy
- Baseline voice laboratory studies and/or
- Laryngeal electromyelography if applicable (can provide definitive diagnostic information and vital prognostic information in some cases)

Treatment of glottal incompetence/vocal cord insufficiency depends on the patient’s symptoms and severity and consists of any of the following:
- Voice therapy
- Surgery if therapy is inadequate
- Food and Drug Administration (FDA) approved injectable bulking agents into the affect vocal fold to augment medialize the folds

Radiesse Voice and Radiesse Voice Gel laryngeal implant are FDA approved for vocal cord medialization and vocal fold/cord insufficiency. Radiesse is an injectable calcium hydroxylapatite (CaHA) implant with a smoothing effect lasting about six months.

Codes:

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>31513</td>
<td>Laryngoscopy, indirect; with vocal cord injection</td>
</tr>
</tbody>
</table>
Lasercopy, direct, with injection into vocal cords(s), therapeutic

Laryngoscopy, direct with injection into vocal cords(s) therapeutic with operating microscope or telescope

Unlisted Procedure of larynx

Laryngoscopy, flexible fiberoptic, with injection into vocal cord(s), therapeutic, including diagnostic laryngoscopy, if performed

ICD-10 codes covered if selection criteria are met:

- J38.01 Paralysis of vocal cords and larynx, unilateral
- J38.02 Paralysis of vocal cords and larynx, bilateral
- J38.5 Laryngeal spasm
- R49.0 Dysphonia
